

ADAPTERS

148, 149, 153, AND 3-WAY BRIDGING TYPES

IDENTIFICATION

1. GENERAL

1.01 This section provides description and uses of the following:

- 148A (MD) and B adapters
- 149A (MD) and B adapters
- 153-type adapters
- KS-19252L1, L2, and L3 3-way bridging adapters.

1.02 This section is reissued to:

- Add information on the 153C and 153D adapters.
- Remove spare contacts on 153A and 153B adapters, Fig. 8, 9, 10, and 11.

Changes or additions in the body of tables are indicated by shaded areas.

2. IDENTIFICATION

PURPOSE

- 148-, 149-, 153-, and KS-19252 type adapters connect plug-ended telephone sets to speakerphone equipment, externally mounted lamps and buzzers, and other auxiliary services.
- 153-type adapters are used to avoid cutting off connector cable ends when a multibutton telephone station is "down graded" to single or two line service.
- KS-19252 type adapter permits multiplying of plug-ended telephone sets with A25B or B25A connector cables.

ORDERING GUIDE

- Adapter, 148A-49 (MD) or 148B-49
- Adapter, 149A-49 (MD) or 149B-49
- Adapter, 153A, 153B, 153C, or 153D
- Adapter, Bridging, KS-19252L1-49, KS-19252L2-49 or KS-19252L3-49

DESIGN FEATURES

148A (MD) and 148B Adapters (Fig. 1)

- Consists of a 3-foot length of 39-conductor cord, terminated at one end in a Y-form molded sleeve attached to a 50-contact KS-16689L2 plug, and a KS-16690L3 connector.
- Loose spade-tipped leads at the free end of the cord are arranged for connection to 44-type connecting blocks, including stayhook for anchoring.
- Pins 1 through 20 and 26 through 45 of the 50-contact plug are interwired by strapping to corresponding pins of the 50-contact connector through the Y arms of the cord (Fig. 2).
- The 19 electrically bridged leads have spade tip insulators to prevent accidental short circuiting when not terminated beneath connecting block screws.

Do not use long-nose pliers to pull off insulators. Insulators should be cut and carefully removed with electrical scissors or diagonal pliers.

- Connectors are held together protectively by a retaining clip (Fig. 1) for protection during shipment.

- The 148B adapter is identical to the 148A adapter, except that the cordage incorporates the even-count color code.

Fig. 1—148A (MD) or 148B Adapter

149A (MD) Adapter

- Has a removable polystyrene cover (Fig. 3).
- Two holes in the base provide a means for mounting.
- Consists of terminal block (Fig. 4), one KS-16671L1 plug, and one KS-16672L1 connector assembled on a metal base.
- Provides a locking screw assembly to secure telephone set mounting cord plug and cable connector after connected to adapter.
- Pins 1 through 47 of the plug, are interwired to corresponding pins of the connector. Terminal strip A is wired to pins of the connector and terminal strip B is wired to pins of the plug (Fig. 5).

◆ Since pins 23 through 25 and 48 through 50 are not common between plug and connector it may be necessary to strap these leads through on the face of the terminal strip when features in the set use these leads. An example could be the common ringer leads.◆

- The wiring diagram is attached to the inside of the cover assembly.

149B Adapter

- Has a removable high-impact polystyrene cover (Fig. 6).
- Is similar to the 149A (MD) adapter except that wiring has been replaced by printed wiring, and the connector and plug are mounted on the face of the printed wiring board assembly (Fig. 7).
- Printed wiring board is mounted to a phenolic baseplate.
- Two holes in the baseplate and wiring board provide means for mounting the adapter.
- A reversible locking fixture attached to the inside of the cover (Fig. 6), secures an external plug (KS-16689L1 plug-ended cord) to the KS-16672L13 connector.
- The external connector (KS-16690L1 connector on an A25B connector cable) is secured to the KS-16671, L10 plug by the inside surface of the cover assembly.
- When the cover assembly is put into position, both connectors and plugs are secured.
- The wiring diagram (Fig. 5) is also molded into the inner surface of the cover assembly (Fig. 6).

153A and 153B Adapters (Fig. 8)

- 153A adapter consists of a KS-16689L6 plug with a terminal block fitted to the back of plug body (Fig. 9).
- 153B adapter consists of a KS-16690L4 connector with a terminal block fitted to the back of the connector body.
- The terminal block has eight screw-type terminals wired to terminals of the plug or connector. (See Table A.)
- A U-shaped trough on top and at cord entrance end of the terminal block assembly

Fig. 3—149A (MD) Adapter Cover (Front View)

Fig. 4—149A (MD) Adapter, Cover Removed

(Fig. 9) serves to retain the wing-type stay band of cords so equipped.

- The hood has a cord-entrance clamping screw which is used to restrain S-hook terminated cords (Fig. 8), and cords of this design should have the conductors taped about 1 1/2 inches to improve appearance and protection (Fig. 8).

Fig. 5—149A (MD) and 149B Adapter, Schematic

Fig. 6—149B Adapter, Inside Cover

Fig. 7—149B Adapter—Printed Wiring Board Assembly

- A removable metal hood (Fig. 10) with a pressed-board liner contains and protects spade-tipped cord leads or wire conductors terminated beneath the screw terminals.
 - ◆ If the liner is of early production design and has an opening in the top portion. A piece of vinyl tape placed over this opening will provide insulation between conductors and hood.◆
- The hood anchoring screw holds the cover in place. It in turn fastens into a threaded insert of a mating connector or plug to hold the two elements together.
- ◆ Early production 153A and B adapters had spare contact springs in the plug and connector. These unused contacts have been removed on later production adapters.◆
- Cords with up to ten conductors (Fig. 9 and 11) may be used with the 153-type adapter. Only eight spade tips can be terminated. Insulate and store extra spade tips. Due to limited space, use KS-19147L1 cord tip insulator (Fig. 11).

In connecting leads to terminal screws dress spade tips to prevent crosses between terminals. Care should be taken to permit possible contact of spade tips with only one wing of stayband on cord. Spade tips should not touch any exposed factory wiring, other spade tips or metal part of the connector or plug.

◆ 153C and 153D Adapters (Fig. 12)

- Physically the 153C and D adapters are the same as the 153A and B adapters.
- The 153C adapter consists of a KS-16689L9 plug and a terminal block which has screw terminals electrically connected to pins 1, 26, 27, 4, 29, 5, and 30.
- The 153D adapter consists of a KS-16690L9 connector and a terminal block electrically connected to the same pins as the 153C adapter.
- Connection information for the 153C and D adapters is covered in Table A.◆

Fig. 9—153A and 153B Adapters, Hood Removed

KS-19252 Type 3-Way Bridging

- Contains a removable cover and a base section containing interwired (bridged) 50-contact plug(s) and/or connector(s). The plugs and/or connectors are wired standard point-to-point at the factory and cannot be changed. (Refer to Table B.)
- The KS-19252L1 is arranged for use with an A25B connector cable and plug-ended set. It can be converted for use with an A25B and B25A connector cable plus a plug-ended set. Normally in this adapter, the connectors are positioned high enough

to handle shallow-hood KS-16689L1 plugs furnished on cords of telephone sets (Fig. 13).

- Field conversion permits either or both of the two connectors to be repositioned sufficiently to receive the deep-hook KS-16689L3 plug of B25A (extension-type) connector cables.

APPLICATION**148A (MD) and 148B**

- Used with plug-ended key telephone sets.

TABLE A
153-TYPE ADAPTER (FACTORY WIRED)

ADAPTER	SCREW TERM. DESIG.	KS-PLUG OR CONN. CONTACT	EQUIV. CABLE PAIR NUMBER
153 A&B	1R 1T	1 26	1
	2R 2T	4 29	4
	R B	20 45	20
	X1 X2	25 50	25
153 C&D	1R 1T	1 26	1
	A1 A	2 27	2
	2R 2T	4 29	4
	A1 A	5 30	5

149A (MD) and 149B

- Connects a D30B- or D50B-type cord to the KS-16672L13 connector
- Connects an A25B connector cable to the KS-16671L10 plug
- Used with 6-button telephone sets equipped with plug-ended mounting cord.
- Used where external features are provided in addition to key telephone set features.

153-Type Adapter

- Connects nonkey telephone sets to cabling systems involving A25B or B25A connector cables

KS-19252 Type 3-Way Bridging Adapter

- Used to multiple service provided by plug-ended A- or B-type connector cables.

Circuit backup conditions could occur when these bridging adapters are used in key telephone system cabling. This could happen especially where individual station customer services such as station busy lamp, line exclusion, control cutoff key, pushbutton and buzzer, and speakerphone services are to be furnished. It is necessary, in this case, to open the bridged telephone set in order to disconnect, and individually insulate and store some of these leads.

Fig. 10—153A Adapter

3. PROCEDURES FOR CONVERTING THE KS-19252L1 ADAPTER

3.01 The connector can be positioned deeper within the base of the adapter as follows:

- (1) Loosen connector mounting screws sufficiently to permit slipout of the two C-shaped plastic

Fig. 11—10-Conductor Cord in 153-Type Adapter

TABLE B
3-WAY BRIDGING ADAPTERS

ADAPTER		COMPONENT ARRANGEMENT
NEW NO.	OLD NO.	
KS-19252, L3	20-3158	plug plug plug
KS-19252, L1	20-3160*	connector plug connector
KS-19252, L2	20-3162	plug connector plug

* Convertible-type adapter.

Fig. 13—3-Way Bridging Adapter, Nonconvertible

spacers (Fig. 14 and 15) which support the connector in base.

(2) Remove spacers. Connector can then be depressed to its lowest mounting position to receive the B25A connector cable plug.

(3) Place removed spacers on top of the connector end tabs (Fig. 16) and tighten connector mounting screws.
