SERVICE

1A2 KEY TELEPHONE SYSTEM

KEY TELEPHONE UNITS

AUXILIARY LINE SERVICES

1. GENERAL

1.01 This section provides schematic information for the 400-series KTUs which provide services auxiliary to Central Office (CO), Private Branch Exchange (PBX), or private line services.

1.02 This section is reissued to add information on the 471B, 479B, and 498A KTUs and the 116A1 circuit module (CM).

1.03 The auxiliary service KTUs covered in this section provide operating features in addition to those provided by the line service units. These features include:

- Conference arrangements—417A KTU
- Multiline exclusion—405A (MD) or 428A KTU
- Supplemental hold arrangements—406A (MD), or 429A (MD) and 429B KTU
- Music-on-hold—451B and 498A KTU
- Toll restriction—471A, 471B, or 479A, 479B KTU

Information on line services is covered in 518-215-400; intercom services and associated features, 518-215-402; control circuits including audible signals, 518-215-403.

Mechanical

1.04 All circuit components on these KTUs are mounted on a plug-in printed wiring board, one end of which is equipped with contacts. A 4-inch board may have 18-, 20-, or 40-contacts; an 8-inch board will have 80 contacts (requiring two vertical 40-pin connectors). The circuit boards plug into mating connectors in key service units, panels, or apparatus mountings. Wiring from the connectors will be dedicated or nondedicated leads. Dedicated leads are those that normally appear on the same contacts of all KTUs, such as supply voltages and grounds, and are normally factory-wired. Nondedicated leads are those whose designation and function vary and are made available for installer connections. Fig. 1 and 2 show typical 4- and 8-inch KTUs.

Fig. 1—Typical 4-Inch Key Telephone Unit

Electrical

1.05 Functional schematics (Fig. 3 through 14) cover the basic circuitry of each KTU, contacts used, and its relationship to telephone sets, other KTUs, power supplies, and apparatus. Dashed lines are used to simplify the schematics and to indicate intermediate circuitry. If full
SECTION S18-215-401

1.06 Voltages required for operation of the KTU, or provided to associated apparatus by the KTU, are shown with their connector pins. Other voltages may appear on the contacts of the mating connector, depending on the mounting arrangement, but not on the KTU.

1.07 KTUs may require the following power supply voltages and their associated grounds.

- -24V (B battery) for control
- -24V (A battery) for talk
- ±10V for visual signals
- ±105V for audible signals

1.08 This issue of the section is based on the following drawings:

SD-69489-01, Issue 5-405A and 428A KTU
SD-69530-01, Issue 6-406A, 408A, 429A, 429B, and 430A KTU
SD-69561-01, Issue 2-417A KTU
SD-69590-01, Issue 2-421A KTU

SD-69922-01, Issue 2—451B, 498A KTU and 116A1 CM

If this section is to be used with equipment or apparatus reflecting later issues of the drawings, reference should be made to the CDs and SDs to determine the extent of the changes and the manner in which the section may be affected.

2. IDENTIFICATION

405A (MD) KTU (Multiline Exclusion Circuit)

2.01 The 405A (MD) KTU (Fig. 3) is a 4-inch, 20-contact unit which must be used with a 259B or 272A KTU. The 405A KTU has been replaced by the 428A KTU (see 2.06 for features) which conforms to standard contact lead configuration.

Note: A 405A (MD) KTU cannot be used in the 513-, 514- or 515-type KSUs, 597- or 598-type panels, or 69-type apparatus mountings.

406A (MD) KTU (Supplementary Hold Detector Circuit)

2.02 The 406A (MD) KTU (Fig. 4) is a 4-inch, 18-contact unit which must be used with a 259B or 272A KTU. The 406A KTU has been replaced by the 429A KTU (see 2.09 for features) which conforms to standard contact lead configuration.

Note: A 406A (MD) KTU cannot be used in the 513-, 514- or 515-type KSUs, 597- or 598-type panels, or 69-type apparatus mountings.

408A (MD) KTU (Flutter Generator Circuit)

2.03 The 408A (MD) KTU (Fig. 5) is a 4-inch, 18-contact unit which must be used with a 259B or 272A KTU. The 408A KTU has been replaced by the 430A KTU (see 2.09 for features) which conforms to standard contact lead configuration.

Note: A 408A (MD) KTU cannot be used in the 513-, 514- or 515-type KSUs, 597- or 598-type panels, or 69-type apparatus mountings.

417A KTU (Add-on Conference Circuit)

2.04 The 417A KTU (Fig. 6) is a 4-inch, 40-contact unit that provides for bridging of two lines for a 3-way conference in the following arrangements:

(a) A CO line and a PBX line
Fig. 3—Condensed Functional Schematic of 405A (MD) KTU (Multiline Exclusion Circuit)
Fig. 4—Condensed Functional Schematic of 406A (MD) KTU (Supplementary Hold Detector Circuit)
(b) Two PBX lines or two CO lines

(c) A CO or PBX line and an intercom line.

The 417A KTU has the following features:

- Circuit can be operated by exclusion switch, external nonlocking key, or converted line pickup key.
- Circuit busy lamp when line pickup key is used.
- Control station can leave conference by placing line on hold and remaining off-hook, allowing other parties to continue conversation without transmission loss.
- Circuit may be controlled by two stations when diode protection is locally furnished.
- Either control station can disconnect from conference leaving two parties to continue conference.
- Compatible with speakerphone.
NOTES:
1. Requires a mounting facility equipped with a 40-pin connector.
2. Diodes shown for "w" option are KS-15724, LI and must be ordered and installed locally.
3. "z" option must be provided when the control station is equipped with the speakerphone feature.
4. Remove and insulate exclusion key leads from terminals T1 and T2 in the telephone set, if so connected.
5. KS-15724, LI diode must be installed in "A" lead of 417A KTU when conference circuit is controlled by a nonlocking key. For method of connection, use station busy option as shown in connecting section of type set used.
6. Associated lamp leads from 400-type line circuit are connected directly to Tel sets.
7. The 417A KTU may be used to provide the add-on feature with dial intercom.

Fig. 6—Condensed Functional Schematic of 417A KTU (Add-On Conference Circuit)
• Circuit is arranged to cancel conference when handset is placed on-hook or speakerphone is returned to OFF.

• One of the conferenced lines may be disconnected by returning exclusion key to normal or by operating the nonlocking key.

428A KTU (Multiline Exclusion Circuit)

2.05 The 428A KTU (Fig. 7) is a 4-inch, 40-contact unit which replaces the 405A (MD) KTU.

2.06 The KTU permits a key telephone set to exclude a station or stations from either of two CO or PBX lines using a common control key. One key can provide control for as many exclusion circuits as are required at a control station. An exclusion key, cutoff or turnbutton key, convertible pickup key, or an external locking or nonlocking key, may be used as the control key. In all cases, exclusion is canceled when the control station hangs up. A visual signal can be provided at the control station, indicating exclusion is in use.

429A (MD) and 429B KTUs (Supplementary Hold Detector Circuit) and 430A KTU (Flutter Generator Circuit)

2.07 The 429A (MD), 429B, and 430A KTUs (Fig. 8 and 9) are 4-inch, 40- and 20-contact units which replace the 406A and 408A KTUs, respectively.

2.08 These KTUs together provide an adjustable lamp flutter of approximately 12 interruptions per second to indicate a supplementary hold condition as distinguished from lamp wink or steady signal associated with a normal hold condition.

2.09 Supplementary hold provides two features:

(a) **Priority Hold** where the flutter indication is desired at all stations having access to lines so equipped. It serves to alert personnel that an incoming call has been answered (acknowledged only), placed on hold, and should be completed as soon as the first available attendant is able to do so. **Priority Hold** requires a key which contains the supplementary hold button as well as the regular hold button.

(b) **I Hold** where the flutter indication is desired only on the line appearance at the station initiating the hold. All other stations receive the normal hold signal. This enables an attendant, having access to a number of lines, to recognize calls he has placed on hold and calls being held by associate attendants. **I Hold** does not require the use of a supplementary hold button; however, the regular hold button must be equipped with a transfer contact arrangement, as in the 566HK-type telephone set.

2.10 A hold detector circuit is required on a **per line** basis with **priority hold** and on a **per station per line** basis with **I hold**. The 429-type KTU provides two detector circuits.

2.11 The 430A (flutter generator) can connect to a maximum of 100 lamps and 20 supplementary and/or regular hold buttons.

451B KTU (Music-On-Hold)

2.12 The 451B KTU (Fig. 10) is a 4-inch, 40-contact unit that provides music-on-hold to CO/PBX line circuits.

2.13 The 451B KTU transmits music to distant stations that are placed on hold by users of this system. The KTU contains seven identical circuits, each of which may provide music-on-hold to one CO/PBX line circuit. The music source should have an adjustable volume control so that the listening level of the music may be adjusted.

◊ **Note:** The 451B KTU is not electrically interchangeable with the 498A KTU, and it cannot be used with the 400H KTU. The 451B KTU cannot be used in the apparatus mounting listed in Table A.◊

471A and 471B KTUs (Battery Reversal Toll Restriction)

2.14 The 471A KTU (Fig. 11) is a 4-inch, 18-contact unit which provides for restricting toll calls on a per-line basis to key telephone stations. This circuit can only be used with central office circuits that provide a polarity reversal on the tip and ring of the line on toll calls.

2.15 The toll restriction circuit is provided to:

• Determine that a toll call has been dialed
• Drop toll calls from restricted stations by opening the tip and ring

• Allow toll calls from unrestricted stations.

2.16 The status of each station during toll calls is determined by the manner in which the station A lead is wired. Restricted stations are wired to the A lead from the associated CO/PBX line circuit; unrestricted stations are wired to the A(U) lead from the 471A KTU (standard wiring arrangement, Fig. 11). This is the preferred method of wiring. The 471A KTU can also be used in installations where grouping of restricted or unrestricted A leads is not desired or where A lead control is not used. In these cases, the 471A KTU is installed in the tip and ring between the line circuit, if used, and the restricted telephone sets (alternate wiring arrangement, Fig. 11). With this wiring, restricted stations on the line may be cut off for approximately 2 seconds during polarity reversal. No A lead connections are made to the 471A KTU.

2.17 The 471A KTU can be installed in any slot of a mounting arrangement that will accept a 400-type KTU line circuit.

2.18 The 471B KTU is identical to the 471A KTU except that it has been updated for use with the privacy and supplementary hold feature. In addition, the 471B has been improved to reduce the minimum duration of polarity reversal that is detected.

479A & 479B KTUs (Rotary Dial Toll Restriction)

2.19 The 479A KTU (Fig. 12) is an 8-inch, 20-contact unit which provides toll restriction on rotary lines where central office toll diversion is not available. Optional circuit modules can be mounted on the 479A KTU to provide digit absorption (107A) or to allow restricted stations to call foreign number plan areas (107B).

2.20 The 479A KTU:

• Monitors rotary dialing to detect restricted digit combinations

• Restricts calls to operator and foreign Numbering Plan Areas (NPA)

• Allows service calls or 800 area code numbers

• Optionally restricts or passes toll calls in home NPAs where the prefix 1 is used

• Can be arranged for loop-start or ground-start operation. Ground start operation provides more security against "nonallowed" calls being placed.

2.21 The 479B is the same as the 479A KTU except it can be used with the privacy feature and/or supplementary hold. The 479B also offers better protection against registration of false digits in step-by-step (SXS) central offices.

2.22 All programming and options (Fig. 12) are applied to the 479-type KTU and the 107A or 107B CM using KS-21290,L1 connectors as follows:

• Ground start or loop start—479-type KTU

• Prefix 1 calls, restricted or permitted—479-type KTU

• Digit absorption—107A CM

• Unrestricted dialing of one or two foreign NPAs—107B CM.

Note: If 107A CM is not required, two 107B CMs can be mounted on the 479-type KTU for a maximum of four allowed NPA codes.

2.23 Because the 479-type KTU is an 8-inch board, it requires a mounting arrangement having two vertical connectors such as a 69D apparatus mounting, 642A panel, or 513-, 514-, or 515-type KSU. The status of the stations during toll calls is determined by how the station A lead is wired. Restricted stations are wired to the A lead of the associated line circuit; unrestricted stations are wired to the A(U) lead from the 479-type KTU. Ground start lines require the A lead be wired as shown in Fig. 12 for start-up control. During power failure, the 479-type KTU will be inoperative and a momentary close contact key must be provided to furnish the ground-start function.

498A (Music-On-Hold)

2.24 The 498A KTU (Fig. 13) is a 4-inch, 40-contact unit which provides music-on-hold for four CO/PBX line circuits. An optional circuit module,
116A1 (Fig. 14), can be mounted on the 498A KTU to provide music-on-hold for an additional three lines.

2.25 The 498A and 116A1 CM provide a balanced connection of music-on-hold to the tip and ring. The music source should have an adjustable volume control so that the music level may be adjusted.

2.26 Table A lists the key service units, panels, and apparatus mounting compatible with the 498A KTU and the 116A1 CM.

2.27 The 498A KTU is not compatible with the 570A and 580A KSUs, 702A and 703A panels. New COM KEY* system installations, with the 570B, 580B KSUs or the 702B and 703B panels with the music-on-hold feature, must include the 498A KTU plus the 116A1 CM for each group of seven lines.

* A 69D equipped with 7-line music-on-hold (116A1 CM) cannot be used with a second 498A equipped with a 116A1 CM or another KTU which requires the use of the RN lead.
Fig. 7—Condensed Functional Schematic of 428A KTU (Multiline Exclusion Circuit)
NOTES:
1. THE 429A KTU WILL PROVIDE SUPPLEMENTARY HOLD FOR TWO CO OR PBX LINE CIRCUITS. EACH HOLD CIRCUIT MAY BE ASSIGNED AS PRIORITY OR I HOLD.
2. REQUIRES A MOUNTING FACILITY EQUIPPED WITH A 20- OR 40-PIN CONNECTOR.
3. LIMITATIONS OF THE 430A KTU ARE AS FOLLOWS:
   A. FLI OR FL2 LEAD CAN SERVE A MAXIMUM OF 50 LAMPS.
   B. SP LEAD CAN CONNECT TO A MAXIMUM OF 20 STATIONS.
4. TO PROVIDE PRIORITY HOLD, A 599H KEY UNIT CONTAINING A SUPPLEMENTAL HOLD KEY AS WELL AS A REGULAR HOLD KEY, MUST BE SUBSTITUTED FOR THE EXISTING KEY UNIT IN THE 1ST MODULE OF THE "CALL DIRECTOR" TELEPHONE.
5. ANY TELEPHONE SET EQUIPPED WITH A HOLD KEY HAVING A SET OF TRANSFER CONTACTS AND SUFFICIENT CORD LEADS CAN INITIATE I HOLD. REWIRE HOLD KEY ACCORDING TO CONNECTION SECTION OF TYPE SET USED.
6. TELEPHONE SETS EQUIPPED WITH 635-TYPE KEYS REQUIRE A SET OF PARTS. REFER TO APPROPRIATE TELEPHONE SET SECTION FOR INFORMATION.

Fig. 8—Condensed Functional Schematic of 429A (MD) KTU (Supplementary Hold Detector Circuit) and 430A KTU (Flutter Generator Circuit)
NOTES:
1. THE 429B KTU WILL PROVIDE SUPPLEMENTARY HOLD FOR TWO CO OR PBX LINE CIRCUITS. EACH HOLD CIRCUIT MAY BE ASSIGNED AS PRIORITY OR I HOLD.
2. REQUIRES A MOUNTING FACILITY EQUIPPED WITH A 20- OR 40-PIN CONNECTOR.
3. LIMITATIONS OF THE 430A KTU ARE AS FOLLOWS:
   A. F1L OR F2L LEAD CAN SERVE A MAXIMUM OF 50 LAMPS,
   B. SP LEAD CAN CONNECT TO A MAXIMUM OF 20 STATIONS.
4. TO PROVIDE PRIORITY HOLD, A 599H KEY UNIT CONTAINING A SUPPLEMENTAL HOLD KEY AS WELL AS A REGULAR HOLD KEY, MUST BE SUBSTITUTED FOR THE EXISTING KEY UNIT IN THE 1ST MODULE OF THE "CALL DIRECTOR" TELEPHONE.
5. ANY TELEPHONE SET EQUIPPED WITH A HOLD KEY HAVING A SET OF TRANSFER CONTACTS AND SUFFICIENT CORD LEADS CAN INITIATE I HOLD. REWIRE HOLD KEY ACCORDING TO CONNECTION SECTION OF TYPE SET USED.
6. TELEPHONE SETS EQUIPPED WITH 635-TYPE KEYS REQUIRE A KIT OF PARTS. REFER TO APPROPRIATE TELEPHONE SET SECTION FOR INFORMATION.

Fig. 9—Condensed Functional Schematic of 429B KTU (Supplementary Hold Detector Circuit) and 430A KTU (Flutter Generator Circuit)
NOTES:
1. Requires a mounting facility with a 40-pin connector
2. Each 451B KTU provides music on hold for seven CO or PBX lines
3. Connect these leads together as close to 451B KTU as possible.

Fig. 10—Condensed Functional Schematic of 451B KTU (Music-On-Hold)
Fig. 11—Condensed Functional Schematic of 471-Type KTU (Battery Reversal Toll Restriction Circuit)
